why choose BioHorizons prosthetics?

Using authentic BioHorizons parts will ensure a precision fit connection between the prosthetic component and implant, avoiding costly component failures that may occur from using third-party prosthetics. Authentic BioHorizons parts are color-coded for easy identification to match the mating implant.

authentic connection

advantages:

- lifetime warranty on all implants & prosthetics
- Spiralock® technology minimizes screw loosening
- precise mating geometries reduce prosthetic failures
- advanced design creates a better engineered connection
- color-coded prosthetic components match implant platforms

engineering better prosthetics

BioHorizons prosthetics are engineered and manufactured to seat precisely every time. The conical connection includes a small space between the components to guarantee contact of the abutment and implant around the entire perimeter of the prosthetic platform. This design creates a biologic seal and achieves optimal stress transmission, that protects the abutment screw from fracture and loosening.

Conical connection creates a biologic seal around the perimeter of the implant's prosthetic platform

Laser-Lok[®] technology

Laser-Lok microchannels is a proprietary surface treatment developed from over 25 years of research initiated to create the optimal implant surface. The establishment of a physical, connective tissue attachment to the Laser-Lok surface has generated an entirely new area of research and development: Laser-Lok applied to abutments. Through this research, the unique Laser-Lok surface has been shown to elicit a biologic response that includes the inhibition of epithelial downgrowth and the attachment of connective tissue.¹⁻⁹ Laser-Lok abutments can support peri-implant health around implants without Laser-Lok. Multiple pre-clinical and clinical studies support both of these concepts.⁴⁻⁹

Comparative SEM images show the variation in tissue attachment strength on standard and Laser-Lok abutments when a tissue flap is incised vertically and manually lifted using forceps.⁵

interactive prosthetic technique manual

The prosthetic technique manual provides fully illustrated step-by-step instruction for the use of BioHorizons prosthetics. The manual is intended to educate both clinicians and labs about the prosthetic options available. It is separated into technique modules that are updated frequently to describe the most current protocols used in implant dentistry.

The PDF versions of these modules are further enhanced by new animated sequences of the procedures providing multiple methods of learning the content.

The manual and animations are available online at www.biohorizons.com/prosthetic-techniques.aspx or on the BioHorizons app in the Prosthetics section.

This icon indicates a step-by-step technique module is available.

The OD Secure abutment uses the industry's lowest profile connection to attach dentures and partial dentures to dental implants. The abutment is designed for easy delivery using an .050" hex driver and is color-coded to ensure that the abutment matches the implant platform every time.

With cuff heights ranging from 0.5mm to 6mm, the OD Secure provides attachment solutions for even the most challenging cases.

The housing cap that is included with each OD Secure abutment corrects up to 15° of divergence. The new Xtend housing cap corrects up to 25° of divergence and is compatible with the retention caps included in the OD Secure abutment kit.

PROSTHETIC PLATFORM IDENTIFICATION

Prosthetic Platform Color Coding

- BioHorizons prosthetic components are color-coded to match BioHorizons implant prosthetic platforms. To ensure compatibility:
- (1) determine the BioHorizons implant system from the patient's record (e.g. Tapered, Tapered Plus, Tapered Tissue Level)
 - (2) verify that the prosthetic component is intended for that system
 - (3) match the restorative component color with the implant prosthetic platform.

Tapered Internal Plus Implant System

prosthetic connection	3.0mm	3.5mm	4.5mm
body diameter	3.8mm	4.6mm	5.8mm

Tapered Internal Implant System

prosthetic connection	3.0mm	3.0mm	3.5mm	4.5mm	5.7mm
body diameter	3.0mm	3.4mm	3.8mm	4.6mm	5.8mm

Tapered Tissue Level Implant System

prosthetic connection	3.5mm	3.5mm	4.5mm	5.7mm
body diameter	3.0mm	3.8mm	4.6mm	5.8mm
